

FRILO StaticsToGo

Your structural analysis documents always with you

With the FRILO app StaticsToGo, you have your structural analysis documents created in the Document Designer available at any time, whether on the construction site, in a meeting or anywhere else. StaticsToGo synchronises project and chapter structures 1:1 from the computer or laptop to the tablet or smartphone.

After synchronisation, the complete content of the statics document is available as a PDF for offline use. The view is exactly the same as on the desktop. You have the option directly in the app to add notes to the items for yourself or your colleagues while on the move and to call them up again later on the PC - ideal for team and project work.

Take advantage of the Pro version

With StaticsToGo Pro you can take pictures or graphics directly with the camera or add them from an existing album to the static document in the app. Extracts from the document itself can also be inserted. Markings are also possible with the editing function.

Download the app from the App Store

StaticsToGo is available on Google Play as well as in the App Store. To add images or graphics, users need StaticsToGo Pro.

The Pro version can be activated directly via an in-app purchase. After a 14-day trial period, a subscription starts at 2.99 euros per month.

STG on video

The video gives you an overview of the individual functions of the app ▶ [Video STG](#)
